---> Comment Text :
In the Science and Engineering Report, and perhaps in others, you use an old
reference citation for Potter and others' study of the Sundance Fault. Instead
of the Potter and others (1995) Administrative Report, you should cite Potter
and others (1998) USGS Open File Report 98-266. The open-file report is an
official USGS publication that can be cited in the scientific literature,
whereas the Admin report is merely an internal report, not citeable in the
scientific literature.
